Karma Connect

AI Usage Audit - is the AI ever doing work we don't need?

Generated 2026-06-17

Finding: the AI computes fit scores that the app never uses.

The on-screen fit scores come from a free, code-based scorer - so the AI's version is generated and thrown away.

What's happening

The AI Analysis step asks the model to return a "fit" object (ICP / qualification / buying-readiness scores with reasons). That is extra output on every analysis call.

But the fit scores shown in the UI come from scoreFit() - a deterministic, rules-based scorer computed in code (free, no AI). A full code review found the AI's fit object is read nowhere; only the code scores are displayed.

So the model spends tokens producing fit scores that are immediately discarded.

Evidence (code references)

- Prompt asks for it: src/lib/prompts.js -> pAnalysis() (the "fit": { icp, qualification, readiness } block).
- Real scores are code-based: src/lib/scoring.js -> scoreFit(); used at src/KarmaConnectAI.jsx:422 (fitRows) and :435 (aiConfidence).
- The AI's analysis.fit is never referenced anywhere in src/.

Impact (estimate, at 2,000 analyses / month)

Item	Per analysis	Per month
Wasted output tokens	~120	~240,000
Wasted input tokens	~50	~100,000
Wasted cost (Sonnet)	**~$0.002**	**~$4 / mo (~$47 / yr)**

Small in dollars - but it is 100% waste: zero benefit for the spend. The value is that removing it has no downside at all.

Recommendation

Remove the "fit" block (and the "Score honestly..." line) from the pAnalysis prompt. Effect: smaller AI output on every analysis call, and ZERO visible change - the on-screen fit scores come from code and will not move. No impact on message quality (this is the analysis step, not message generation).

Every AI call reviewed

AI call	Needs AI?	Verdict
Company research	Yes (web search)	Keep
LinkedIn paste parsing	Yes (messy text)	Keep
Analysis: profile (persona/hooks/pains)	Yes	Keep
Analysis: fit scores	No - code does it	REMOVE (this finding)
Message generation	Yes	Keep
personalization % / acceptance % / AI Coach	Shown, not essential	Feature choice

Note: estimates from prompt sizes. "personalization/acceptance/AI Coach" are AI extras that ARE displayed - removing them is a feature decision, not dead weight. Company research and paste parsing genuinely need AI (the text is too variable for plain code).
