Anthropic API Cost Estimate

Generated 2026-06-15 · Model: Claude Sonnet 4.6 · 2,000 prospects/month

Assumptions

- Volume: 2,000 prospects per month, worked on weekdays only (~22 working days = ~91 prospects/day).
- Model: Claude Sonnet 4.6 at $3.00 / 1M input tokens and $15.00 / 1M output tokens.
- 5 message variations per engine (reduced from 10 to 5).
- Estimates from prompt sizes + typical output lengths; prompt caching (~5–10% input saving) is NOT applied, so figures are conservative.
- Each engine is generated on demand — you only pay for the ones opened. Web-search research is the largest and most variable item.

Per-prospect token breakdown (Typical full run)

Call	Input tok	Output tok	Cost
AI Analysis	1,650	800	$0.017
Connection (5 drafts)	2,600	600	$0.017
Relationship (5 drafts)	2,700	900	$0.022
Meeting, 1 length (5)	2,800	1,300	$0.028
Follow-up (5 steps)	2,800	1,400	$0.029
Total per prospect	**12,550**	**5,000**	**$0.113**

Monthly & annual cost by usage scenario (Sonnet 4.6)

Scenario	Per prospect	Per month	Per year
Light	$0.055	$110.70	$1,328.40
Typical (full)	**$0.113**	**$225.30**	**$2,703.60**
Full + research	$0.195	$390.30	$4,683.60

Light: Analysis + connection + relationship only
Typical (full): Analysis + connection + relationship + 1 meeting + follow-up
Full + research: Typical + LinkedIn paste parse + web-search company research

Most likely (Typical full run):

$225.30 / month · $2,703.60 / year

If switched to Claude Haiku 4.5 (about 1/3 the price)

Scenario	Per prospect	Per month	Per year
Light	$0.018	$36.90	$442.80
Typical (full)	$0.038	$75.10	$901.20
Full + research	$0.065	$130.10	$1,561.20

Haiku cuts cost ~3× but lowers output quality — best reserved for parsing/research, with Sonnet kept for the outreach copy.

Estimate only. The app records exact per-call token usage to the usage table in production; query GET /api/usage after a real run for actuals.
